Setting up Apple ID on your iPad

What is an Apple ID?

An Apple ID is a user name you can use for everything you do with Apple. When you create an account for an Apple service, such as iCloud or the App Store, you create an Apple ID. The same Apple ID lets you access Apple's other services. You don't have to create a new account for each service—just use your Apple ID. **Taken directly from** https://www.apple.com/au/support/appleid/basics/

Before you create an Apple ID

You need to create the Apple ID, which is used to establish an iTunes account.

As the iTunes service is available to individuals age 13 or older. Horsham College asks that when creating an Apple ID that:

- the **Horsham College student email account** is used to create the Apple ID

- Parents create the password and not share this with their child. This allows the parent to have control of the Apps being used on the iPad

- the security questions and answers are completed by a parent. Please keep a record of these questions and answers in a safe place

- a parents date of birth be used when creating the account

- the parents email address is used in the 'Rescue Email Account' section

- Horsham College's address be used in the 'Postal Address' section – High Street North, Horsham, Victoria, 3400

Now to create an Apple ID

Your can create an Apple ID using an internet enabled device by going to this site:

https://appleid.apple.com/account?localang=en_AU
